

**Job Title:** Building Enclosure Architect

**Firm Name:** Wiss, Janney, Elstner Associates, Inc. (WJE)

**Location:** Pasadena, California

**Firm Profile:** Wiss, Janney, Elstner Associates, Inc. (WJE) is a national engineering and architectural firm that employs extraordinary people at all organizational levels. We engage highly skilled people with outstanding character and a strong desire to excel as members of the WJE team. WJE encourages people to be innovative, supports participation in professional activities, and provides a competitive compensation and benefits package.

**Salary:** Competitive, commensurate with experience

### **Job Description**

The Los Angeles office of WJE, located in Pasadena, California, is seeking candidates with expertise in building enclosure consulting. A degree from an accredited college or university from schools of architecture; engineering; building construction and technology; or similar interdisciplinary programs that integrate building engineering or science is preferred. A qualified candidate will have five to seven years of relevant work experience in addition to a passion for WJE's work which is solving problems with new and existing structures. The role requires the performance of routine assignments including investigations and testing of buildings with minimal oversight as well as assisting with preparation of client deliverables, under the direction of project managers.

### **Job Requirements**

- Master's degree in Architecture and/or Architectural Engineering
- 5 - 7 years of building enclosure experience
- Strong computer skills, including AutoCAD and Microsoft Office
- An interest in building enclosure forensic investigations, field testing, and building restoration
- Strong written and verbal communication skills
- Ability to work independently and as part of a project team
- Ability and interest in performing work in the field
- Ability to travel outside local area, depending on local workload and project locations
- Desire to work towards professional licensure as an Architect or Professional Engineer
- Practical experience with building enclosure design and/or construction
- Basic understanding of heat, air, and moisture flow in building assemblies
